

AdWrap-it is a bold and innovative company created to provide signage and erosion control services primarily to the construction industry. The business is built around a core of experienced professional managers. AdWrap-it is based in South East Queensland with sales offices in NSW and Victoria from where it services the entire Australian market. The company's philosophy is to understand the market and each customer's unique requirements. We deliver services and products to specification timeously. AdWrap-it has built an enviable reputation among leading construction and development companies.

AdWrap-it has invested in state of the art printers to provide superior quality printing on shade cloth, banner mesh, vinyl, poly and corflute media. These products are used for dust control, building wraps, safety signs and banners. Logos and company names are featured on these materials providing striking visual impact.

Erosion control on construction sites has become a key concern for both the community and the environmentalist lobby. Local councils have responded by introducing more stringent legislation and rigorous enforcement. AdWrap-it works with its customers to ensure that they are fully compliant and guarantees delivery deadlines. We also offer customers the opportunity to brand their environmental products to maximize this outdoor advertising space.

The entire team at AdWrap-it from our business development managers to printing technicians and installers have developed unique expertise and experience over their many years in the industry. The emphasis at AdWrap-it is on quality, service, design excellence and technical and marketing innovation. We have recently completed major works for Brookfield Multiplex, Adco Construction and AV Jennings.

At AdWrap-it you will talk to the decision makers and can be assured of professionalism and absolute commitment from all levels to ensure that work is completed accurately, timeously and in compliance with all regulations as to your specific specifications.
